**Section 1194.21 Software Applications and Operating Systems - Detail  
Voluntary Product Accessibility Template**

Criteria	Supporting Features	Remarks and explanations
<p>(a) When software is designed to run on a system that has a keyboard, product functions shall be executable from a keyboard where the function itself or the result of performing a function can be discerned textually.</p>	<p><b>Supported with exceptions:</b></p> <p>Keyboard access is provided in a number of areas throughout Inductel Illustrated Medical Dictionary Plus Medical Speller 2009. Keyboard shortcuts, shortcut keys, and menu commands are available.</p> <p>Inductel Medical Illustrated Medical Dictionary and Medical Speller 2009 Help functionality includes an accessible reference guide for keyboard accessibility.</p>	<p>There are a few instances where keyboard support does not work for hyperLinks in HTML documentation.</p>
<p>(b) Applications shall not disrupt or disable activated features of other products that are identified as accessibility features, where those features are developed and documented according to industry standards. Applications also shall not disrupt or disable activated features of any operating system that are identified as accessibility features where the application programming interface for those accessibility features has been documented by the manufacturer of the operating system and is available to the product developer.</p>	<p><b>Supported:</b></p>	
<p>(c) A well-defined on-screen indication of the current focus shall be provided that moves among interactive interface elements as the input focus changes. The focus shall be programmatically exposed so that Assistive Technology can track focus and focus changes.</p>	<p><b>Supported:</b></p>	<p>Tested with JAWS 10 with Java Access Bridge installed.</p>
<p>(d) Sufficient information about a user interface element including the identity, operation and state of the element shall be available to Assistive Technology. When an image represents a program</p>	<p><b>Supported with exceptions:</b></p>	<p>The Clickable Graphics is not currently supported through keyboard shortcuts</p>

element, the information conveyed by the image must also be available in text.		
(e) When bitmap images are used to identify controls, status indicators, or other programmatic elements, the meaning assigned to those images shall be consistent throughout an application's performance.	<b>Supported:</b>	
(f) Textual information shall be provided through operating system functions for displaying text. The minimum information that shall be made available is text content, text input caret location, and text attributes.	<b>Supported:</b>	
(g) Applications shall not override user selected contrast and color selections and other individual display attributes.	<b>Supported:</b>	
(h) When animation is displayed, the information shall be displayable in at least one non-animated presentation mode at the option of the user.	<b>No animation is used:</b>	
(i) Color coding shall not be used as the only means of conveying information, indicating an action, prompting a response, or distinguishing a visual element.	<b>Supported:</b>	
(j) When a product permits a user to adjust color and contrast settings, a variety of color selections capable of producing a range of contrast levels shall be provided.	<b>Supported:</b>	User may select Font, size, and color for text used in search lists and definitions
(k) Software shall not use flashing or blinking text, objects, or other elements having a flash or blink frequency greater than 2 Hz and lower than 55 Hz.	<b>Supported:</b>	
(l) When electronic forms are used, the form shall allow people using Assistive Technology to access the information, field	<b>No forms are used</b>	

elements, and functionality required for completion and submission of the form, including all directions and cues.
